Log 1:Features of a study matching app:

1. Account and Profile

-Register and log in: Users create an account and sign in securely. Without this, the system can't tell researchers and participants apart.

-Terms and conditions: Users must accept these (and consent to data use) when creating a profile, so the app is legally covered.

-Participant profile page: Shows name, surname, age, interests and skills, so researchers know who is applying.

-Demographic and screening details: The system collects income band, age, ethnicity, health concerns and similar details. These are used to categorise users and check eligibility.

-Edit profile and delete account: Users keep their details up to date and can remove their data if they leave. Users should be able to delete their accounts too.

2. Researcher: Managing Studies

-Create a study listing: Enter a title, description, time commitment and reward.

-Categorise the study: Assign an area, subject and topic so participants can find it easily.

-Set dates: Add the study start date, end date and the deadline to apply.

-Set participant limit: Choose how many participants the study needs. Applications stop once it is full.

-Define eligibility criteria: Set rules such as age range, income band or health condition. The system stores these with the listing.

-Save as draft: Keep an unfinished listing private and come back to it later.

-Publish a listing: Make a finished listing visible to participants.

-Edit a listing: Change details after posting, for example fixing a typo or updating the deadline.

-Close a listing: End recruitment early, for example when enough people have applied.

3. Researcher: Managing Applicants

-View applicants per study: See everyone who has applied to a particular study.

-See sign-up numbers: Check how many participants have signed up compared with the limit.

-Accept or reject applicants: Decide who joins the study.

-Export participant list: Download the accepted participants (for example as CSV or Excel) for use outside the app.

-Notify applicants: Tell applicants whether they were accepted or rejected.

4. Participant: Finding and Applying

-Browse all studies: View the full list of available studies.

-Search and filter: Narrow results by category, reward, time commitment or dates.

View study details: See the dates, time commitment, reward and application deadline before applying.

-Apply to a study: Submit an application with one action.

-Track application status: See whether each application is pending, accepted or rejected.

-Withdraw an application: Cancel an application if the participant changes their mind.

5. System Logic (Automatic Features)

-Eligibility check: When a user applies, the system compares their details with the study criteria.

-Block ineligible users: Users who don't meet the criteria cannot apply, and they see a clear reason why.

-Block late or full applications: Applications are refused after the deadline or once the participant limit is reached.

-Automatic user categorisation: The system sorts users into groups (income, age, ethnicity, health concerns) using the information in their profile.

-Study recommendations: The system suggests studies that match a user's profile. This is what makes it a "matching" app.

6. Data Protection

-Collect only what is needed: Ask only for the details that studies actually require.

-Explicit consent: Users agree to the use of sensitive data (race, health, income) through the terms and conditions.

-Limited researcher view: Researchers see only what they need, ideally a pass/fail eligibility result rather than raw health data.

-User control: Users can view and delete their own data.

Important Pages:

Public:

-Landing page: Explains what the app does and links to register or log in.

-Register page: Users create an account, choose a role (researcher or participant) and accept the terms and conditions.

-Log in page: Users sign in to their account.

-Terms and conditions page: Shows the full terms and how sensitive data is used.

Participant:

-Participant profile page: Shows and edits name, surname, age, interests, skills and screening details.

-Browse studies page: Lists all available studies with search and filters.

-Study details page: Shows the full study information, deadline and spaces left, with an Apply button.

-My applications page: Lists the user's applications and their status (pending, accepted, rejected).

Researcher:

-Researcher dashboard: Overview of all their studies (draft, published, closed) with sign-up numbers.

-Create/edit study page: Form to enter study details and criteria, with Save as Draft and Publish buttons.

-Applicants list page: Shows applicants for a study, with accept/reject buttons and an export option
